presents

How to

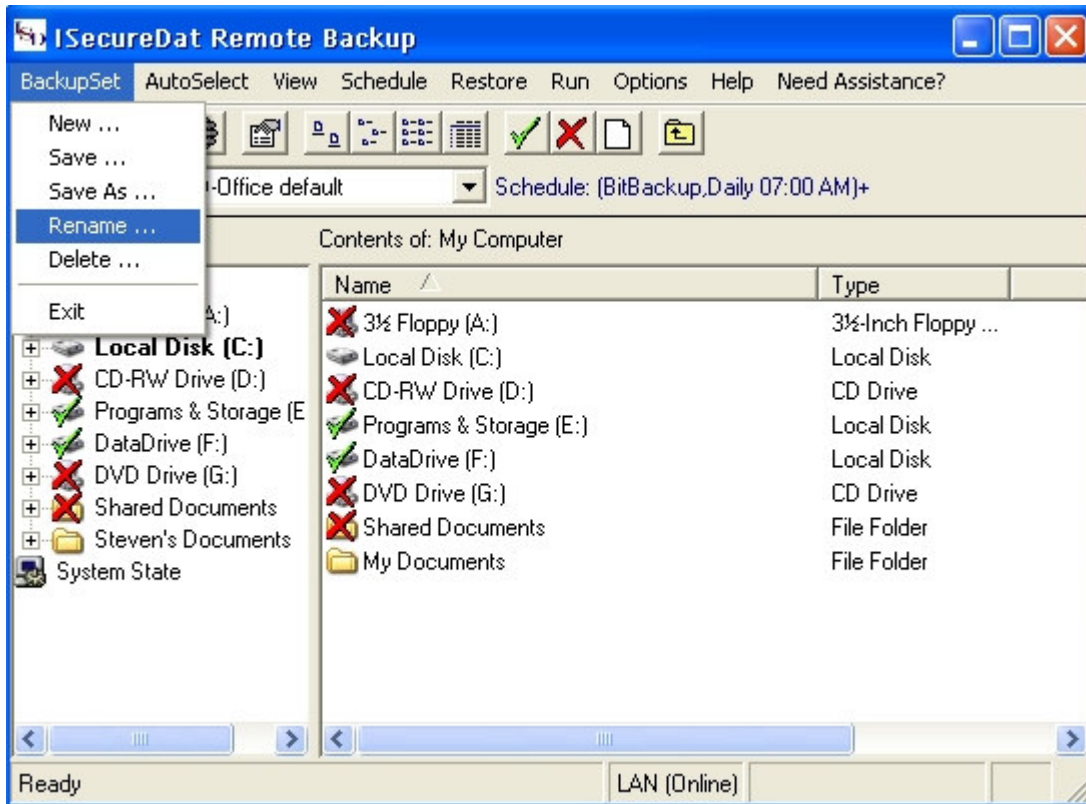

Update Your Agent Information

The purpose of this document is to show you the procedure of updating your account information if you have been using either a free 30 day trial (demo) account or a temporary account used for the initial installation and you have now received your official ID and Password from ISecureDat.

To begin, double click to ISD icon at the lower right in your toolbar.

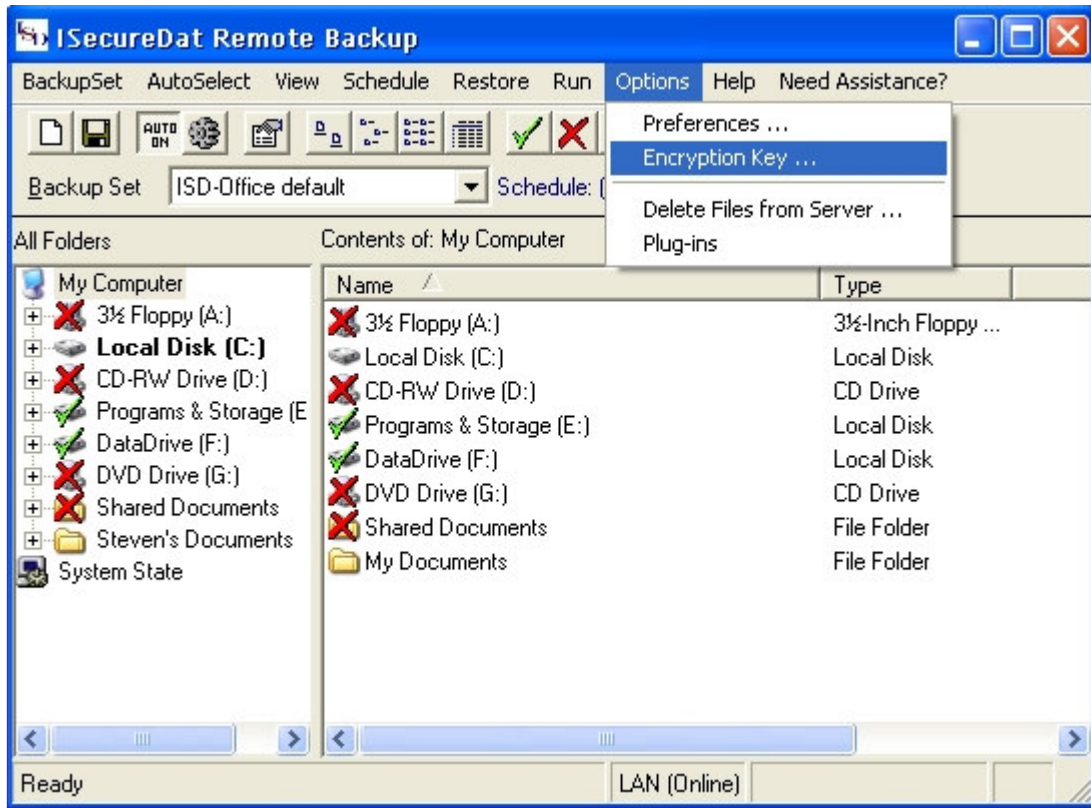

This will launch the agent application and open the following window. Select “BackupSet” on the top main menu and move down to “Rename ...”. Click “Rename ...”. You can make this a name that has a meaning to you with respects to the type of files you are backing up in this set. Proceed to the next step.

You'll notice in the image above there is also the “New ...” option. This is where you would create any additional sets you desire. This will not change the current set's name nor the selection of files being backed up with this set.

Once you have renamed your set, mouse over the “Options” menu and select “Encryption Key ...”.

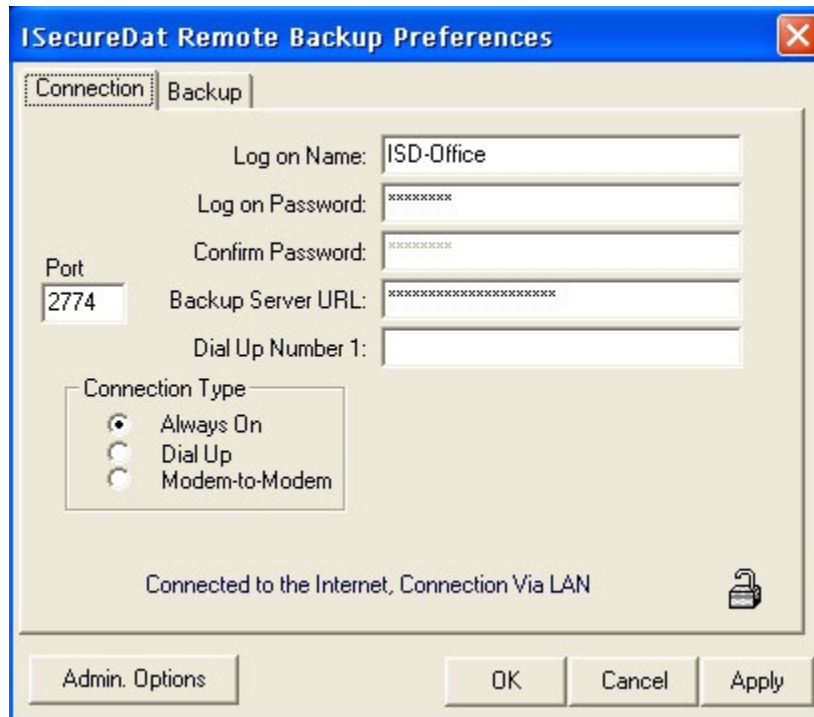

The following password window is displayed. Enter “demo” and click “OK”.

Enter the official “Log on Name” and “Log on Password” supplied to you in the e-mail from ISecureDat. When you highlight the password to overwrite it, the “Confirm Password” will become blank as well allowing you to confirm the new password.

Please do not change any other settings in this window like the “Port” number or “Backup Server URL” as this would effectively ruin any possible communications between the agent and ISecureDat server.

Your agent has now been updated and you may proceed with your backups.
